PROFILE

Electrical Engineer with a Master's in Advanced Robotics and Artificial Intelligence, offering deep expertise in computer vision, intelligent automation, and embedded systems for industrial environments. Skilled in building end-to-end solutions from data collection and model training to production deployment and hardware integration. Combines software development with industrial control and electronic design to deliver robust, scalable automation systems.

PROFESSIONAL EXPERIENCE

Summer Intern WIC MIC GROUP	06/2026 – 08/2026 Bizerte, Tunisia
Developed a ticket-scanning API using computer vision and OCR technologies, deployed via FastAPI with database persistence and containerized for scalable field use.	
Master's Thesis Intern WIC MIC GROUP	02/2025 – 05/2025 Bizerte, Tunisia
Built a computer vision system for real-time garment measurement on production lines, from raw dataset collection and annotation through model training to Docker containerization with SQL Server storage. Integrated multicamera calibration, pose estimation, and automated comparison between production output and reference standards, achieving measurement deviation below ± 0.3 cm and enabling full production traceability.	
Bachelor's Project Intern HYCO Industries :Constructions métalliques	02/2023 – 05/2023 Nabeul, Tunisie
Automated CNC machine with MACH3 and Raspberry Pi, enhancing precision by 15%.	
Technical Intern CMR Tunisia Ship Repairs	01/2023 – 02/2023 Bizerte, Tunisie
Analyzed water level systems and automated controls using Ladder Logic in TIA Portal.	
Junior Intern SACEM Industries	01/2022 – 02/2022 Bizerte, Tunisie
Assisted in implementing test machine programs to optimize workflow.	

EDUCATION

Engineering Degree in Electrical Engineering National Higher School of Engineers of Tunis (ENSIT)	2025 – 2027
Master's Degree in Advanced Robotics and Artificial Intelligence Higher Institute of Technological Studies of Bizerte	2023 – 2025
Bachelor's Degree in Electrical Engineering– Industrial Automation Higher Institute of Technological Studies of Nabeul	2020 – 2023

ACADEMIC PROJECTS

Robot Mobile Intelligent	2025 – 2026
Designed and developed a Bluetooth-controlled mobile robot with PWM motor control, interrupt-based emergency stop, real-time sensor acquisition (ADC, I2C), and IoT monitoring via ESP8266, ThingSpeak, and Node-RED.	
Automated Temperature and Humidity Measurement System	2024 – 2025
Built manual and automated temperature and humidity measurement system using LabVIEW, Arduino, ISIS, and VISA communication with real-time data logging and analysis via Excel and cloud-based tools.	
Facial Recognition System	2023 – 2024
Designed and deployed a facial recognition system with 95% accuracy, real-time data storage in SQL Server, and containerized deployment using Docker.	

TECHNICAL SKILLS

Embedded & Industrial: Raspberry Pi, Arduino, ESP32, FPGA, VHDL, TIA Portal, PLC, CNC, LabVIEW	AI & Computer Vision: TensorFlow, PyTorch, OpenCV, MediaPipe, Object Detection, Pose Estimation, OCR	Tools & Languages: Python, C, SolidWorks, MATLAB/Simulink, FastAPI, SQL Server, Docker
